THE RISKIEST JOBS IN AMERICA?

According to the National Bureau of Labor Statistics, public entities have some of the highest occupational accident and injury rates of any employer. Road workers, police officers, firefighters and even teachers can work in exceptionally hazardous conditions. Surprisingly, the average governmental employee would be safer in manufacturing, construction or even an underground mine. With the diversity of risks that public entity employees face, creating effective safety programs can be a daunting task.

J. A. Montgomery Risk Control has created a unique unit of specialists that focuses on the variety of challenges faced by public entities. In addition to experienced safety professionals, J. A. Montgomery integrates retired law enforcement and fire service command officers into our safety teams. We know how government operations work because we have first-hand experience from those that have worked in government all their lives. Our experts have created programs that have taken some of the riskiest jobs in the country and made them safer.

RESULTS ORIENTED

With more than two decades of experience helping public entities, we've delivered real results. Sustainable results are only achieved by consistent effort over time. Clients served by J. A. Montgomery for at least 10 years report an average 63% reduction in their employee accident rates. Most of our clients have been with us for over 20 years. During that time, we've saved clients over \$1 billion by lowering their accident rates.

In addition to periodic inspections of client facilities, we work directly with client safety committees and provide the model policies and procedures for everything they need to conduct a comprehensive risk control program.

UNMATCHED RESULTS

555

government entities have trusted us to develop their risk control programs, including: **10** counties, **375** municipalities, **70** authorities, **40** fire districts, **60** boards of education

WE HELP YOU SEE RESULTS

63%

reduction in the employee accident rate among clients we have served for at least **10** years

in taxpayer savings over **20** years

1,200

onsite inspections and consultations each year

WE EDUCATE YOUR TEAM

online training courses developed by our team to train your employees how to comply with PEOSHA regulations

40,000

employees attended online courses in **3** years

employees attended instructor led safety training courses in **15** years

WE HAVE THE EXPERIENCE THAT MATTERS

12

Safety Professionals including specialists in general safety, emergency management, law enforcement and property protection

Average years of professional risk control experience

ESSENTIAL AND INNOVATIVE TRAINING PROGRAMS

At the heart of our risk control services for public entities are robust, regular and formalized training programs. During the last 15 years, J. A. Montgomery has conducted over 20,000 safety classes attended by over 400,000 employees. Research shows that organizations where safety training is up to date report 46% fewer accidents on average than those with out-of-date safety training.

As risks have changed, so have our training programs. J. A. Montgomery has built a web-based system that trained 40,000 employees in just 3 years. This has reduced the need for our clients to send employees to more costly classroom sessions. Our in-house teams have produced numerous online programs to meet the specialized needs of governmental entities. We know that emerging risks must be addressed quickly and efficiently to avoid costly claims and complications. In the last decade, we aggressively developed a cyber risk management training program as those risks became more prevalent. Other notable and specialty training programs include:

- Back injury avoidance for emergency service employees
- Assault self-defense training for law enforcement and public educators
- Management training programs

CUSTOM PROGRAMS, AWARD-WINNING SOLUTIONS

We like to consider ourselves not just as risk control experts, but problem solvers for our clients. We're committed to coming up with customized and innovative solutions to meet our clients most pressing needs. One of the most dangerous governmental occupations is a public works employee. With an understanding of the unique hazards public works employees face, we developed a safety training video and program called "Don't Get Caught in the Crush Zone." It received international awards for its effectiveness and quality. The program highlighted the risks of "crush zones"— areas where public works employees are at risk to be crushed by large objects or construction equipment.

To help public entities improve safety for another high-risk occupation, crossing guards, we worked with law enforcement to develop the most comprehensive school crossing guard training program in the country.

Sometimes public officials face safety problems that do not directly impact the insurance budget, but are of major concern to the voters. We've built solutions for that as well. We produced a comprehensive program showing local officials how to address the high pedestrian accident rate in urban and suburban communities. We wrote another program to address the epidemic of slips and falls among senior citizens.
